Pumps

Centrifugal slurry pumps

Schegler® Horizontal

Schegler® Vertical

Minto® Submersible

For the main Warman®, Linatex®, and Tsurumi® series, we supply models that are fully interchangeable in terms of dimensions and performance.

Spare parts

We maintain a large inventory of critical spare parts for all pumps we service including Schegler®, Minto®, and other brands like Warman®, Linatex®, Cavex®, Metso®, and PEMO®.

Components & add-ons

Components & add-ons

Kinarox® Hydrocyclones

Krux® Knife valves

Kinarox® Slurry hosing

Pulsa® Greasing systems

Brayston® Mechanical seals

Engineered Systems

Booster stations

Sand wash plants

We specialise in

Pumps

Multistage Pumps

Syroc® (Horizontal)

Doblo® (Horizontal)

Leo® (Vertical)

Self-Priming Pumps

Varisco®

Metering Pumps

Brite®

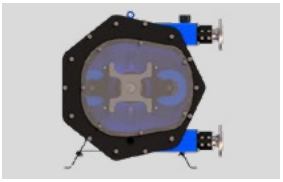

Well Pumps

WPS®

Peristaltic Pumps

Peribest®

Progressive Cavity Pumps

Kronoa®

Screening Equipment

Vibrating Screens

Temper®

Screening Media

Hydran®

Motors

Electric Motors

Services

Maintenance, upgrades & on-site support for critical slurry equipment.
From urgent repairs to long-term optimisation, we're here to keep you running.

How can we help you?
Click to get in touch!

On-site

Vaikon Stock Stops™

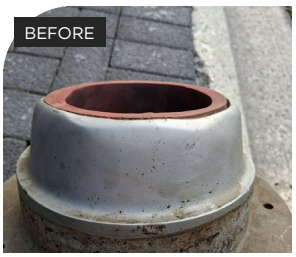

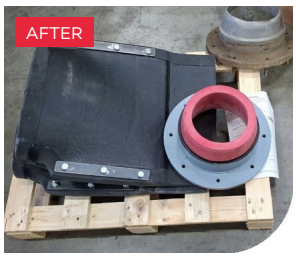

Our service teams arrive fully equipped to inspect, replace and restore in one visit, for faster maintenance, fewer delays and maximum uptime.

Condition monitoring & laser alignment

We measure vibration, temperature and wall thickness on-site to catch wear early. Laser alignment ensures optimal shaft positioning and longer equipment life.

Off-site

Refurbishment

We build new equipment in-house, fully assembled and tested. We also refurbish worn components and pumps, restoring them to peak performance.

3D scanning & reverse engineering

We scan damaged or discontinued parts to recreate them with full accuracy. Perfect for equipment no longer supported by the original manufacturer.

Rubber repair & relining

We repair and reline Linatex® and other rubber-lined pump and cyclone parts. Worn rubber is removed, the metal is sandblasted and a new layer of 35 Shore A natural rubber is applied. We also supply all parts for Linatex® SE cyclones. Lead time 3 to 4 weeks.

Maintenance and more

New builds
Upgrades & improvements
Smart maintenance
Energy optimisation
Reliable operation

Why Vaikon?

Vaikon is **a full-service partner for companies that handle slurry**, fluids that are abrasive, corrosive, and complex by nature. Our mission is to support companies in the sustainable production and recovery of raw materials, helping to build a better world for tomorrow.

We do this by delivering robust equipment and practical support that help slurry handling processes run better, longer, and more efficiently.

The Vaikon promise

Free on-site assessment
We visit, assess, and help improve your setup.

Response within 24 hours
Questions, break-downs or quotes? We're just a call away.

Solution ready
We ship 90% of common slurry equipment straight from our stock.

Guaranteed solution
We don't stop until you're up and running. Whatever it takes.

Next-day shipping
For all critical parts we keep in stock.

Why you'll benefit

We help you reduce wear, energy consumption, and unplanned downtime, three of the most significant cost drivers in slurry handling. We optimize how your equipment runs, improve maintenance routines and redesign what's holding your process back – for more uptime, longer life, and lower costs.

How we work

- We look at the **full process**, not just the pump
- We **support** you from first advice to final commissioning
- We **adapt to your site**, timeline, and technical needs
- We **solve problems** on-site and don't leave until everything runs as it should

Let's move your process forward

Want to optimise an existing installation or start something new?
Or are you looking for specific spare parts or service?
We're happy to think along, no strings attached.
